(54) SYSTEM AND METHOD FOR CALLER ID AUTOMATIC PAGING

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a caller ID automatic paging function.

SOLUTION: A telephone call processing device is provided with a decoder 111, that is adaptive to decode call relating information received in an incoming call and with a call unit 113 that is adaptive to call a message and a paging, based on the call relating information. According to the embodiment, the method for processing an incoming call has a step where the number of incoming ring signals is counted, the call-relating information of the incoming call is decoded, and a paging number is selectively called together with the message based on the call-relating information when number of the ring signals counted in the count step exceeds a prescribed threshold value.
